

User Story Storyboard: Admin Login (Mobile Screen Style)

User story: As an Admin, I want to log in securely so that I can manage platform operations.

```

User Steps and Comments

1. Open the app and go to Admin Login. Comment: The entry screen collects admin credentials only.
2. Enter username/email and password, then tap Login. Comment: Credentials are validated by secure authentication logic.
3. If credentials are invalid, show a clear error message on the same login screen. Comment: User can immediately correct input and retry.
4. If login succeeds, perform role check before allowing admin navigation. Comment: Authentication alone is not enough; authorization is mandatory.
5. If the user is not admin, block admin-only screens and show access denied. Comment: This enforces non-admin restrictions in acceptance criteria.
6. If the user is admin, redirect to Admin Dashboard. Comment: Successful path satisfies dashboard redirection requirement.
7. On any protected admin route, verify active session and admin role again. Comment: Route-level guard keeps admin features inaccessible without correct role.
